

Comp 322

Lab 1

Introduction to Kotlin

The purpose of this lab is to introduce the student to functions, data types, data structures, and conditions using the Kotlin programming language. The finished program will print a randomly chosen Bible verse each time the program is run.

Use ChatGPT (<https://chatgpt.com/>) to generate a list of ten Bible verses. This is the only time that students are allowed to use ChatGPT for this course. Create a Kotlin function that will randomly select one of the Bible verses and return it to the calling function, in this case the main function.

This lab can be completed using the Kotlin Playground (<https://play.kotlinlang.org/>) or using the IntelliJ IDE (<https://www.jetbrains.com/idea/download/>). The lab report should contain a brief description of what the lab does followed by screen images of the source code and successful execution. The lab report should also contain an explanation of any problems encountered while completing the lab and the estimated time for completion. Submit the lab report along with the source code to Canvas by the due date. If you have any questions, please ask.
