Lab 9 Storing Data Locally in a Room Database

The purpose of Lab 9 is to introduce students to building mobile applications that store data locally in a Room database. This lab will be a modification of Lab 7. It will have the same functionality. However, it will retrieve the scripture data from a Room database.

The lab report should contain a brief description of what the lab does followed by screen images of the source code and successful execution. The lab report should also contain an explanation of any problems encountered while completing the lab, and the estimated time for completion. Submit the lab report along with the entire project source code (zipped together) to Canvas by the due date. If you have any questions, please ask.
